### EXAMINER'S STATEMENT OF REASONS FOR ALLOWANCE

1. New corrected drawings in compliance with 37 CFR 1.121(d) are required in this application because the corrected or substitute drawings filed 4/23/2004 has been approved. Applicant is advised to employ the services of a competent patent draftsman outside the Office, as the U.S. Patent and Trademark Office no longer prepares new drawings. The corrected drawings are required in reply to the Office action to avoid abandonment of the application. The requirement for corrected drawings will not be held in abeyance.

2. Claims 1-5, 7-16 and 18-25 are allowed.

3. The following is an examiner's statement of reasons for allowance:

Applicant's invention is drawn to a video processing system for tracking a moving person or other object of interest using a combined audio-video tracking system (i.e., a video processing in a video conference system including an audio-video tracking system for controlling the settings of a pan-tilt-zoom camera, wherein the audio-video tracking system comprises an audio locator, a video locator, and a set of rules for determining which settings of the camera are adjusted based on tracking outputs of the audio locator and the video locator, thereby allowing an autonomously-moving camera to effectively become the moderator of a video conference).

Applicant's independent claim 12 recites, *inter alia*, an apparatus for tracking an object of interest in a video processing system with a structure as defined in the specification (pages 7-14) including a processor coupled to the camera and operative to process an audio locator output

Art Unit: 2643

from an audio input signal and a video locator output from a video input signal derived partly from movement of the object, each indicative of a location of the object of interest for particular ones of given measurement intervals, and to apply a set of confidence level rules to each of the audio locator output and the video locator output to determine which one of the audio locator output and the video locator output has a higher confidence level, whereby the one having the highest confidence level will be utilized independently of the other to adjust a setting of the camera based on the given measurement interval. Applicant's claim 12 comprises a particular combination of elements, which is neither taught nor suggested by the prior art.

Applicant's independent method claims 1 and 23 each recite, *inter alia*, generating for particular ones of successive plural measurement intervals an audio locator output from an audio input signal and a video locator output from a video input signal, each indicative of a location of the object of interest, applying a set of confidence level rules to each of the audio locator output and the video locator output to determine which one of the audio locator output and the video locator output has a higher confidence level, whereby the one having the highest confidence level will be utilized independently of the other to adjust a setting of the camera during each one of said successive plural measurement intervals, and adjusting the camera setting utilizing only the selected one of the audio locator output and the video locator output in accordance with the applied set of confidence level rules. These steps are neither taught nor suggested in the prior art.

Accordingly, Applicant's claims are allowed for these reasons and for the reasons recited in Applicant's Amendments filed 4/23/2003, 11/13/2003, 2/23/2004, and 7/15/2004.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
